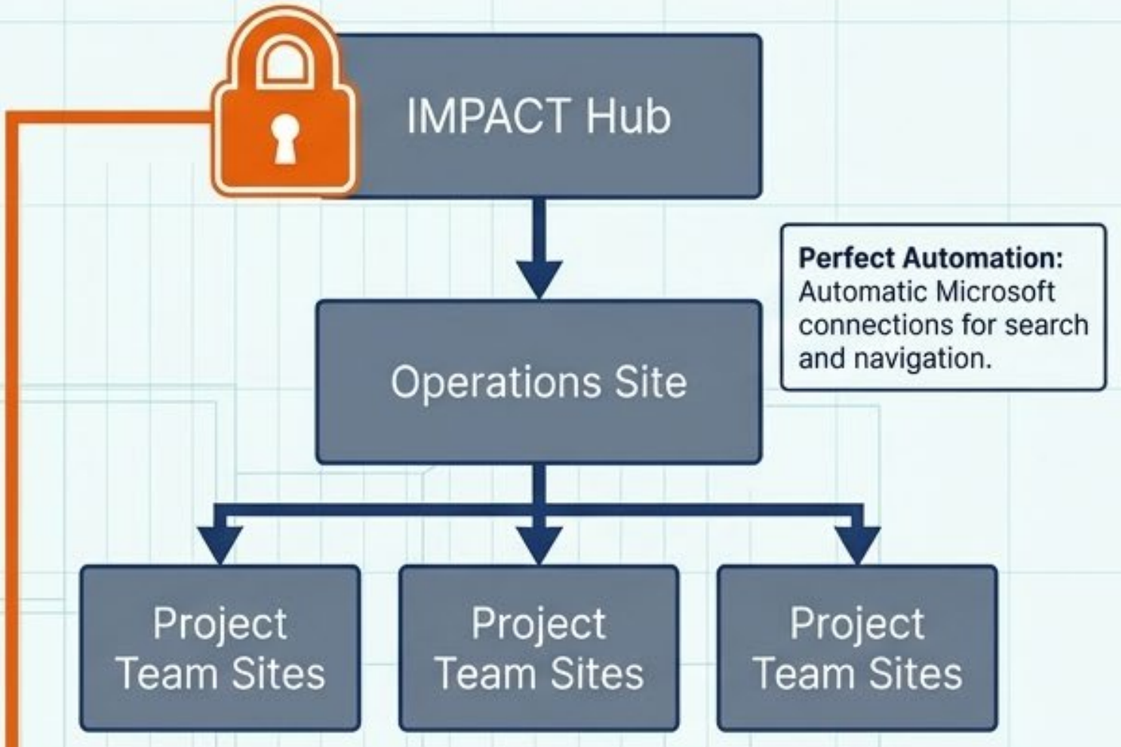
Evaluating Structural Paths for Deployment

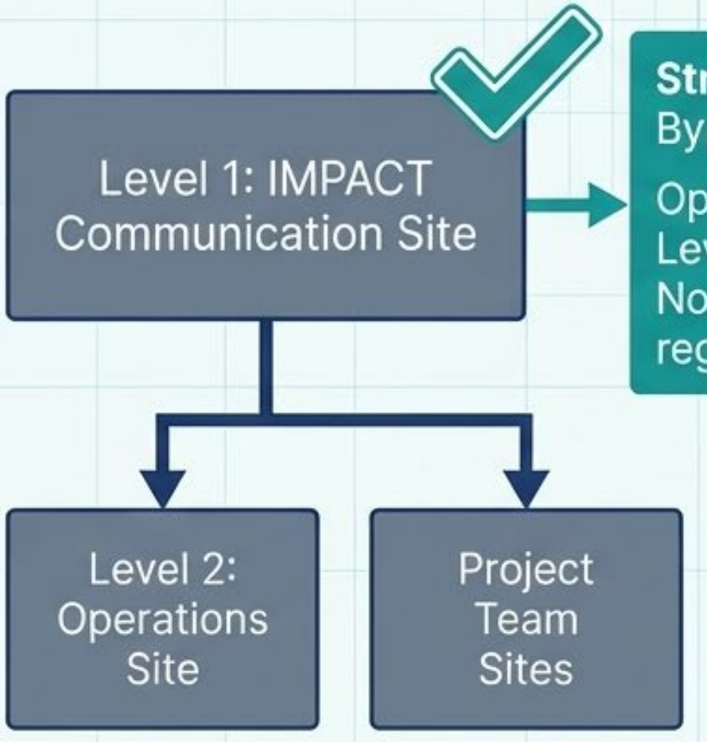
Option A: 3-Tier Hub



Perfect Automation: Automatic Microsoft connections for search and navigation.

Hard Blocker: Requires tenant-level IT approval to register the Hub site. Operations cannot execute this independently.

Option B: 2-Tier Comm Site



Strategic Advantage: Bypasses IT Blocker.

Operations creates Level 1 independently. No tenant-level Hub registration required.

Constraint: Relies heavily on manual connections, links, and bookmarks instead of auto-aggregation.

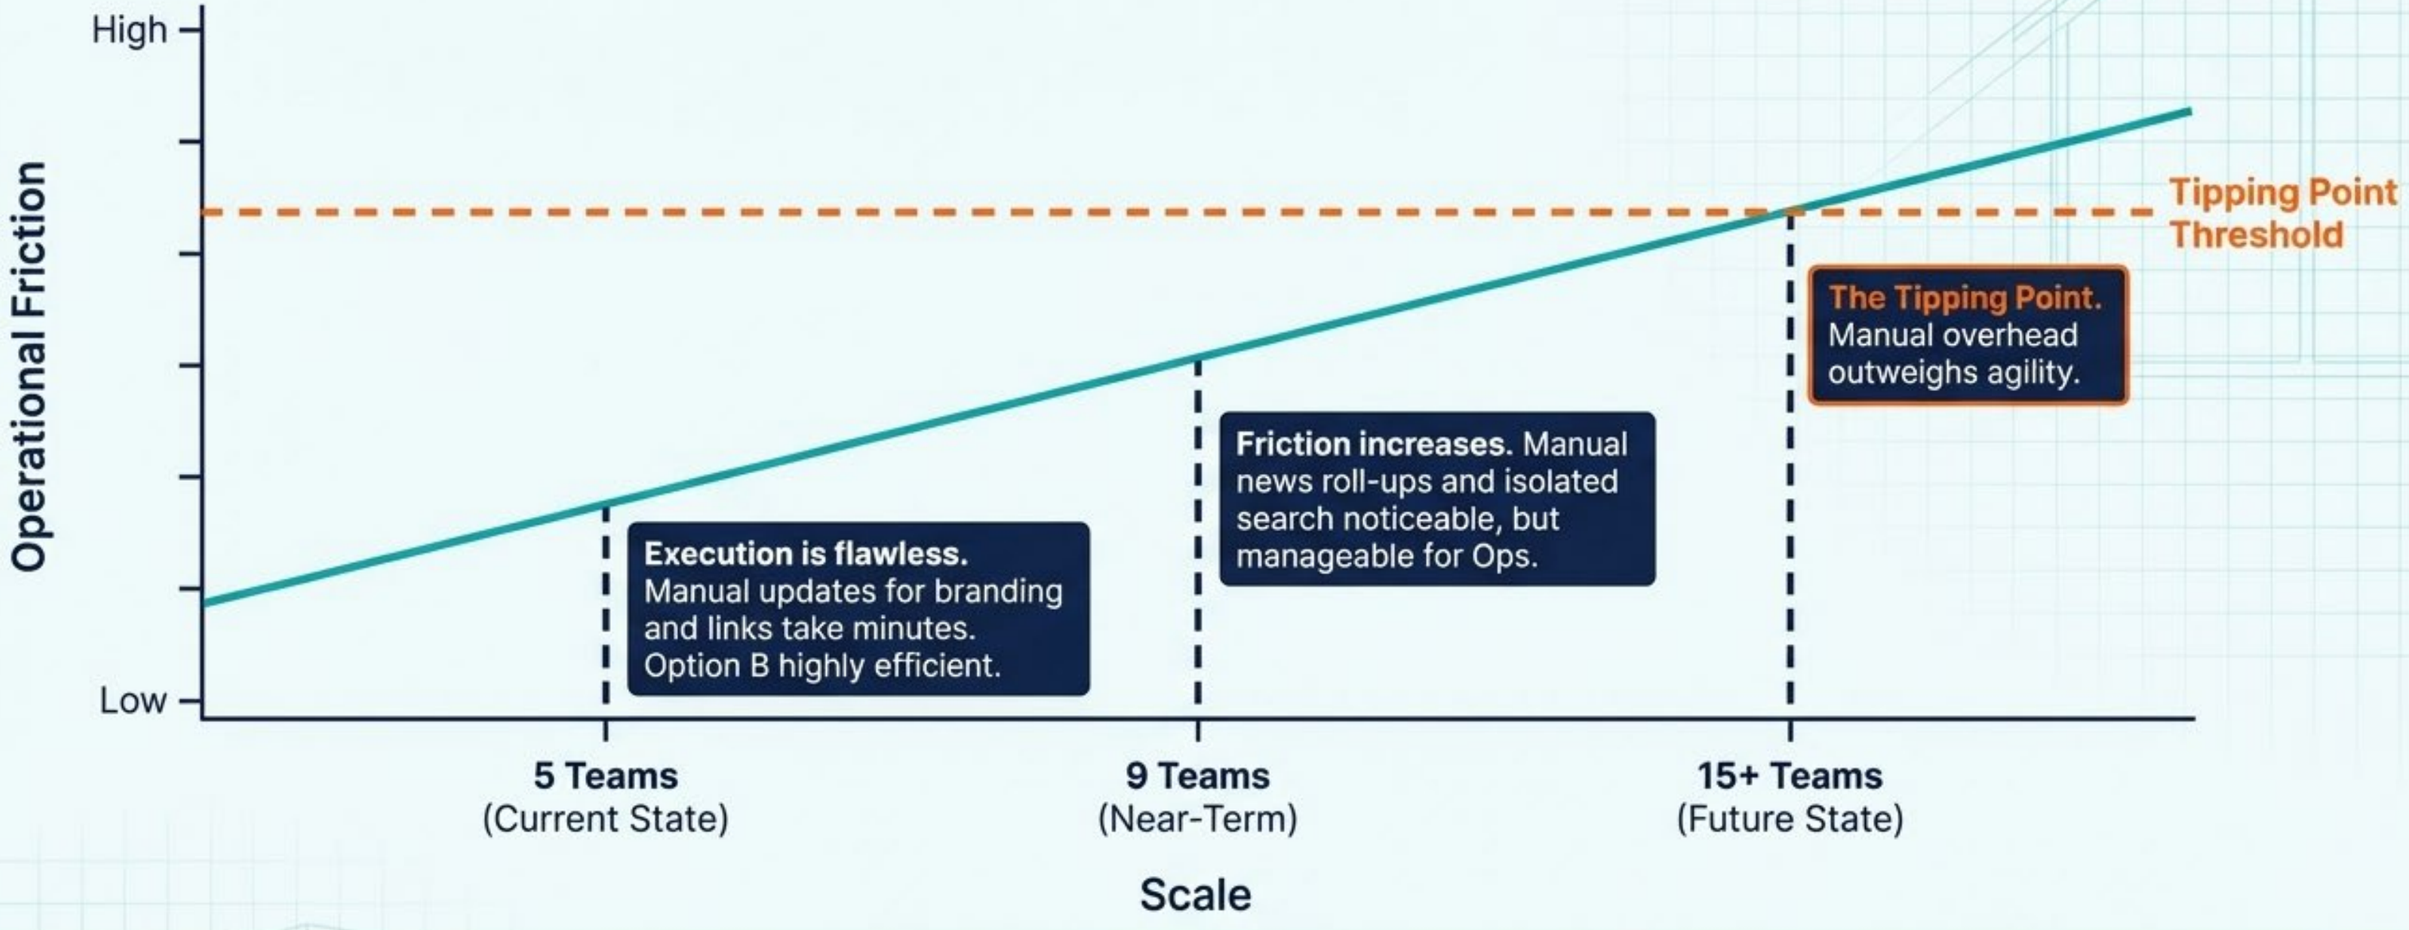
Operational Workarounds Secure the 2-Tier Approach

	Option A (3-Tier Hub)	Option B (2-Tier Comm Site)
Feature: Planner/Lists/Automations	✓ Fully Supported	✓ Fully Supported
Feature: Student Navigation	One click	Bookmarks/Links
Feature: Global Branding Updates	Automatic	Manual per site
Feature: Build Viability	**Hard Blocker: Requires IT Hub Registration**	IT blocker removed

Limitation: No automatic navigation bar. → **Workaround:** Ops embeds a clearly labeled “Links” section on the Level 1 homepage for students.

Limitation: Team news does not roll up to home page automatically. → **Workaround:** Replaced by a standardized Weekly Teams Channel post by Team Leads.

The Horizon and Migration Strategy



Strategic Directive: Deploy Option B today to achieve immediate operational goals. Migrate to Option A (3-Tier Hub) once the IT relationship is established and we reach the 15+ team scale.
